

We Share the Same Moon Needs YOU!

The aim of We Share the Same Moon is to create story-based resources for use in science education - in formal and informal settings around the globe.

But how useful is it?

Do the science activities work?

Does the story help introduce the topic?

How can we improve this cross-curriculum approach?

Help us to find this out!

By filling in this form - and be part of an evaluation of our stories and science activities - with as many people and places as possible around the world

IN RETURN - we will keep you posted on all our latest resources as we add them to the site - stories images, videos and activities.

Participate in future events - for FREE

We will be piloting throughout 2019 and 2020 100's more stories, science and literacy activities

To do this we need YOU!

If you would like to be a host venue for any pilot event - please get in touch!

Can you tell us:

Your Name:

Country where based or where working if different:

Who were your test audience/participants?

What were their ages?

How many took part?

What curriculum topic did you choose?

What story and/or science activity did you select?

We Share the Same Moon Needs YOU!

Story:

Was the story the right one to introduce the topic?

Was it easy to tell or read or listen to?

How could we improve our story resources?

Science story:

Did the explanation give you enough information to explain the science behind the topic chosen?

Did the children understand?

Was the language used in the explanation too simple/too complex?

Science activity :

Was the activity successful in helping the children understand the science activity?

Was it too simple or too hard for your children to do?

Any other comments

Please tell us honestly what we need to change or add to make the site more useable

Many thanks!
